MAHATMA GANDHI UNIVERSITY, KOTTAYAM
MGU-BBA(HONOURS) REGULAR EXAMINATION OCTOBER 2026
Skill Enhancement Course (SEC) - MG5SECBBA301 - AI FOR BUSINESS
(2024 ADMISSION ONWARDS)

Duration: 1 Hour **Maximum Marks: 35**

Remember(K), Understand(U), Apply(A), Analyse(An), Evaluate(E), Create(C), Skill(S), Interest(I)and Appreciation(Ap)

Part A

MULTIPLE CHOICE QUESTIONS

Answer all questions

Each question carries 1 marks

Questions 1 to 20: Award 1 mark for each correct answer. No partial marks.

Q No	Key	Correct answer
1	b	To evaluate performance on previously unseen cases
2	d	A unit of text processed by the model
3	c	A chatbot designed to answer customer enquiries
4	a	Platform model
5	d	To help members notice and select relevant content
6	d	A consistent form of written data
7	a	Designing a business poster
8	b	Timing personalization
9	d	The tendency to trust an automated recommendation too readily
10	a	Internet of Things
11	a	A newsletter collects only the subscriber’s email address
12	c	A network of organisations and people who cooperate to create innovation
13	b	Designing and using AI in an energy-efficient and environmentally responsible way
14	a	They bring together business and technical knowledge
15	a	By improving its language and organisation
16	a	Market trends and customer needs
17	b	Ethics or governance committee
18	d	All of the above
19	d	All of the above
20	d	Skilled AI professionals may be limited and expensive to recruit

Part B Case study

Question 21

1) Identify the major challenges and support the answer with evidence from the case. Suggested allocation: 5 marks.

Suggested pointers for the answer: (1 mark may be awarded to identification and explanation per point)
Poor data quality: missing entries, duplicate profiles and outdated contact details can weaken forecasts and recommendations.
Uneven infrastructure: some stores have older computers and unreliable connectivity, hindering consistent implementation.
Employee resistance: staff fear job replacement, which may reduce acceptance and cooperation.
Limited AI knowledge: many managers lack AI understanding and need training to use and assess outputs.
Unclear accountability: responsibility for checking AI decisions has not been assigned, creating weak oversight.
Language bias or privacy concerns
Any other point that is given in the case

2) Examine the bias and data-privacy concerns and suggest suitable responsible AI measures. Suggested allocation: 5 marks.

Suggested pointers for the answer: (1 mark may be awarded to identification and explanation per point)
Bias concern: regional languages are inadequately represented in training data, causing different chatbot performance and unequal service across customer groups.
Privacy concern: customers are not clearly informed about use of purchase histories and conversations, weakening transparency and meaningful control over their data.
Bias measures: improve representation of regional languages in training data; test performance across language groups and monitor or correct disparities.
Transparency and customer choice: give clear notices stating what data is collected and why; obtain appropriate consent where required and offer suitable choices or withdrawal mechanisms.
Data protection: collect only necessary data, restrict access, secure stored or transmitted data, set retention limits or anonymise data where appropriate. Any two explained measures at 0.5 each.
Any other criteria as per case

3) Explain how collaboration can support introduction of the system while preserving employee roles and managerial accountability. Suggested allocation: 5 marks.

Complementary roles: AI forecasts stock requirements, answers routine enquiries and analyses records; employees contribute judgement, customer understanding and contextual knowledge.

Human review and authority: managers check important recommendations, such as stock orders, and can approve, modify or reject them. Complex chatbot issues are escalated to staff.
Training and employee participation: provide AI literacy and practical training; involve employees in the pilot, redesign work with them and explain how their roles will develop.
Clear accountability: assign named managers or teams to validate outputs, approve consequential decisions, investigate errors and remain answerable for outcomes.
Continuous feedback and monitoring: staff report incorrect forecasts, chatbot errors and language issues; the company reviews outcomes, records decisions and improves the system.
Any other criterion identified in the case. Criteria need not be given a heading. One mark may be allocated to each point identified in the answer.

Note that this is an Apply-based case study. Hence, marks may be awarded if students have been able to successfully defend the answers based on the case study and additional knowledge about the topic. Mark liberally.
