MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-UGP (Honours)/ MGU-BBA (Honours)/ MGU-BCA (Honours) REGULAR EXAMINATION October 2026

Fifth SEMESTER

Discipline Specific Core Course (DSC) - MG5DSCFSQ300 - TECHNOLOGY OF MEAT, FISH, EGG AND POULTRY

(2024 ADMISSION ONWARDS)

Duration: 1 hour 30 minutes **Maximum Marks: 50**

Remember(K), Understand(U), Apply(A), Analyse(An), Evaluate(E), Create(C), Skill(S), Interest(I) and Appreciation(Ap)

Students should attempt at least one question from each course outcome to enhance their overall outcome attainability.

Part A

MCQ

Answer all questions

Each question carries **1** marks

1. Identify the term used for the removal of internal organs from a poultry carcass. [K] / [CO1]

   a). Trussing

   b). Giblet removal

   c). Evisceration

   d). Dressing

2. Identify the processing temperature for meat canning from the following [U] / [CO1]

   a). 121ºC

   b). 110ºC

   c). 100ºC

   d). 102ºC

3. Select the factor most likely responsible for excessive drip loss after thawing of a frozen fish product: [U] / [CO1]

a). Repeated freezing and thawing

b). Proper rapid freezing

c). Good glazing

d). Constant frozen storage

4. Distinguish the contractile unit of a muscle fibre. [U] / [CO1]

a). Sarcomere

b). Myofibril

c). Myosin

d). Tendon

5. Interpret the purpose of evisceration during carcass processing. [U] / [CO1]

a). Remove internal organs

b). Improve meat tenderness

c). Increase moisture content

d). Add preservatives

6. Classify edible fish on the basis of anatomical differences. [U] / [CO1]

a). Fin fish and Shellfish

b). Lean fish and oily fish

c). Freshwater and processed fish

d). Round and flat fish

7. Name a fermented sausage [K] / [CO1]

a). Frankfurter

b). Salami

c). Bologna

d). Ham

8. State the characteristic odour associated with fresh fish [U] / [CO1]

a). Putrid

b). Ammoniacal

c). mild fresh odour

d). Sour

9. Name the outermost protective covering of an egg. [K] / [CO2]

a). yolk membrane

b). shell

c). Albumen

d). Chalazea

10. Describe how protein denaturation contributes to microbial inactivation during HPP. [U] / [CO3]

a). Nutrients increase.

b). Spores are formed

c). Proteins become more active.

d). Enzymes lose activity and metabolism stops

[1x10 = 10]

Part B

Short Answer

Answer any **4** questions

Each question carries **5** marks

11. Summarize the changes in meat colour and flavour during the post-mortem period. [U] / [CO1]

12. Explain the relationship between albumen quality and egg freshness. [U] / [CO2]

13. Describe the advantages and disadvantages of ohmic heating. [U] / [CO3]

14. Identify the procedures involved in ante-mortem examination before slaughter. [U] / [CO1]

15. Classify meat based on the source and characteristics with suitable examples. [U] / [CO1]

16. Define vacuum packaging and explain its principle. [K] / [CO1]

[5x4 = 20]

Part C

Essay

Answer any **2** questions

Each question carries **10** marks

17. Discuss the spray-drying process used for producing egg powder. [U] / [CO2]

18. Discuss the major meat by-products obtained during animal slaughtering. [U] / [CO1]

19. Summarize the preparation, nutritional significance and application of Fish Protein Concentrate. [U] / [CO1]

20. Explain the relationship between oxygen availability, microbial growth, lipid oxidation and meat colour in vacuum-packaged meat. [U] / [CO1]

[10x2 = 20]
