MAHATMA GANDHI UNIVERSITY KOTTAYAM
SEMESTER III - INDUSTRIAL CHEMISTRY MINOR PRACTICAL EXAMINATION
Model Question paper
Course Code: MG3DSCICH200
Course Title: Functional Operations in Chemical Industry
Time: 3 Hours **Maximum Marks: 35**

Part-I (Answer any ONE question, 5 marks)

1. Crystallise benzoic acid from hot water using fluted filter paper and stemless funnel. Record the yield of recovery.

2. Crystallise phthalic acid from hot water using fluted filter paper and stemless funnel.

Part-II (Answer only the specified question, 5 marks)

3. Write the brief procedure for the experiment in question number ..... in the first 10 minutes.

Part-III (Answer only the specified question, 10 marks)

4. Perform simple distillation of a binary mixture (Methanol + Water or Ethanol + Water). Record the boiling point and percentage recovery.

5. Determine the rate of evaporation of a sugar solution or NaCl solution using an open pan evaporator.

6. Perform solvent extraction of aniline from water using ether. Calculate the percentage recovery.

7. Perform solvent extraction of methyl benzoate from water using ether. Calculate the percentage recovery.

8. Study the rate of drying of sawdust or cardboard under room temperature conditions.

9. **Viva voce (10 marks)**

10. **Lab report (5 marks)**
