BSc (Hons) Cyber Forensics

III Semester Model Question Paper

MG3DSECFS201: Operating Systems (Operating System Architecture Specialization)

Duration: 2 Hours **Marks:70**

Part A (Answer any 10 out of 12)

1.Discuss the objectives of operating system

2.Discuss about multiprogramming system.

3.Define real-time operating systems

4.What is meant by system call?

5.Explain hold and wait condition

6. Distinguish between Threads with Process

7.Describe context switching.

8.Explain how does semaphores work in operating system

9.Explain Process Control Block

10.Define Shell

11.Distinguish between hard link and soft link

12.Which command is used to delete the character before the cursor location in vi editor

[2x10 = 20]

Part B (Answer any 6 out of 8)

13.Distinguish between multiprogramming and time-sharing systems?

14.Define CPU Scheduling. Distinguish between pre-emptive scheduling and non-pre-emptivescheduling

15.Describe what are the necessary conditions of Deadlock.

16.Explain the benefits and drawbacks of contiguous memory allocation

17.what is Segmentation? State the advantages of Segmentation

18.Define the virtual memory.State its advantages?

19.Compare various shells available in Linux

20. Explain various modes of vi editor

[5x6 = 30]

Part C (Answer any 2out of 3)

21.Illustratevarious file allocation methods in operating Systems.

22.Explain various page replacement algorithms.

23.Explain the file system hierarchy of the in Linux Operating System.Discuss the significance of directories such as /bin, /etc, /dev etc.

[10x2 = 20]
