MAHATMA GANDHI UNIVERSITY, KOTTAYAM

MGU-UGP (HONOURS) REGULAR EXAMINATIONS, MARCH 2026

Fourth Semester

SEC-MG4SECZGY200

Emergency Life Support and First Aid

Duration: 1.5 Hours Maximum Mark:50

PART A – MCQ (12 × 1 mark) Answer all questions (12 X 1 =12 marks)

1	Which of the following best defines first aid? A. Long-term medical treatment provided in hospitals B. Immediate and temporary care given before professional medical help C. Specialized surgical intervention D. Rehabilitation after injury	[U]	[CO:1]
2	Which of the following is a primary objective of first aid? A. Diagnosis of disease B. Preservation of life C. Prescription of drugs D. Replacement of medical treatment	[U]	[CO:1]
3	In the AVPU scale, a casualty who reacts only to painful stimuli is classified as: A. Alert B. Voice C. Pain D. Unresponsive	[A]	[CO:1]
4	In the FAST method of stroke recognition, the letter “T” indicates: A. Temperature assessment B. Tongue movement C. Time to act D. Tremors	[A]	[CO:1]
5	Which fracture is most commonly seen in children and involves a partial break of the bone? A. Comminuted fracture B. Open fracture C. Greenstick fracture D. Impact fracture	[K]	[CO:3]
6	The RICE protocol used in sprain management does NOT include: A. Rest B. Ice C. Compression D. Exercise	[K]	[CO:3]
7	Which is the correct first-aid position for an unconscious but breathing head-injury patient? A. Supine position B. Prone position C. Recovery position D. Sitting position	[A]	[CO:3]

8	The “Jaw thrust” maneuver is preferred over head-tilt chin-lift when: A. The patient is conscious B. There is suspected cervical spine injury C. The casualty is a child D. Foreign body is visible	[A]	[CO:5]
9	The correct sequence of steps in basic life support is: A. Breathing–Airway–Circulation B. Circulation–Breathing–Airway C. Airway–Breathing–Circulation D. Airway–Circulation–Breathing	[K]	[CO:2]
10	Which insect sting leaves its barbed stinger embedded in the skin? A. Wasp B. Fire ant C. Honeybee D. Scorpion	[K]	[CO:4]
11	Which venom primarily affects the nervous system in snake bite cases? A. Hemotoxic B. Neurotoxic C. Cytotoxic D. Myotoxic	[K]	[CO:4]
12	Which burn involves damage only to the epidermis? A. Second-degree burn B. Third-degree burn C. First-degree burn D. Fourth-degree burn	[K]	[CO:4]

PART B – Short Answer (3 marks) Answer any 6. (6 X3 =18 marks)

13	Define first aid and explain its importance in emergency situations.	[U]	[CO:1]
14	Describe the AVPU scale used in emergency assessment and explain its significance in monitoring a casualty’s condition.	[A]	[CO:1]
15	Explain the first aid management of fractures, highlighting the principles of immobilization.	[A]	[CO:3]
16	Explain the ABC principle of Cardiopulmonary Resuscitation (CPR) and its importance in basic life support.	[U]	[CO:2]
17	Describe the recovery position and discuss its importance in unconscious but breathing casualties, particularly in poisoning cases.	[A]	[CO:5]
18	Discuss the first aid measures for drowning victims after rescue, emphasizing the role of early intervention.	[A]	[CO:3]
19	Describe the classification of burns based on depth and outline the dangers associated with severe burns.	[U]	[CO:4]
20	Classify wounds and describe the first aid management of small cuts and abrasions.	[U]	[CO:3]

PART C – Short Essay (5 marks) Answer any 4 (4 X5 =20 marks)

21	Discuss the principles and rules of first aid, highlighting the role of the first aider in preserving life and preventing further injury during emergencies.	[U]	[CO:1]

22	Describe the types, causes, signs, and first aid management of fractures and dislocations, emphasizing the importance of immobilization techniques.	[A]	[CO:3]
23	Classify burns based on cause and depth, and discuss the dangers of burns along with first aid measures for dry burns and scalds.	[U]	[CO:4]
24	Explain crisis management in emergency situations with reference to scene safety, emotional support, effective communication, and the use of the AVPU scale in casualty assessment.	[A]	[CO:1]
25	Explain the concept of Cardiopulmonary Resuscitation (CPR) using the ABC approach, including airway management techniques and their significance in basic life support.	[U]	[CO:2]
26	Discuss rescue and first aid measures in drowning cases, including safe rescue principles, post-rescue care, and the importance of early CPR and medical intervention.	[A]	[CO:5]
