PART C

1.Explain the role of beginner-friendly AI platforms in modern Zoology education.

2.Describe the applications of Artificial Intelligence in biological image analysis.

3.Describe the different types of errors encountered in biological experiments.

and Explain how machine learning helps in minimizing these errors.

4.Examine the challenges of data privacy, ownership, and regulatory governance in the use of AI for healthcare and biological research.

5.Explain, step by step, how machine learning can be used to reduce errors in PCR gel quantification experiments.

6.Describe the historical development of Artificial Intelligence applications in biological sciences.

7.Explain the sources, consequences, and mitigation strategies of algorathimic bias in healthcare.
